

IRFA Empirical Replication Package

Raw CHFS 2013/2015/2017 inputs to Tables 1-8

How to run

Use **Stata/MP 18.0** on Windows. Set the current working directory to the extracted package root and run **00_run_all.do**. No internet connection is needed because the validated community command files are included under **ado**.

The master file cleans each CHFS wave, appends and constructs the analysis data, links the required supplementary variables, creates the final sample, and reproduces Tables 1-8.

Package contents

data/raw/chfs: separate CHFS household, individual, and master files for 2013, 2015, and 2017.

data/raw/auxiliary: household-city crosswalks and the city-level local-control inputs used by the analysis.

code: wave cleaning, appending, linkage, variable construction, final-sample preparation, estimation, and table formatting.

data/final: **IRFA_analysis_sample.dta**, the household-year analysis sample produced by the master file.

00_run_all.do: the master do-file. **config** contains path settings, **ado** contains the required Stata commands, and **tables** contains the RTF outputs.
